Spylux

Light in every situation

Never lose sight of what's happening with the new Spylux and Nightlux multifunctional lamps

Based on the 2 in 1 principle, providing a motion sensor and a torch in 1, OSRAM introduces Spylux and Nightlux, two innovative multifunction products giving more light and safety in all situations. Both lamps have motion sensors and a moving LED source, bringing light to exactly where you need it. Whether it's a dark basement or a garden shed, a tucked away corner or steep steps, these new all-rounders are there to improve visibility day and night without cables or sockets. And these handy lamps are economical to boot. A brightness sensor automatically checks how dark it is, meaning that Spylux and Nightlux only react when there is a real need for light.

Many accidents happen in the place you feel safest in the home. It is not only at night that steep stairs, sharp table edges and stumbles can result in bumps and bruises.

Spylux is the ideal solution to this problem. The battery-powered, water and weather-resistant lamp from OSRAM reacts to even the slightest movement and makes rummaging around in the basement or the attic much easier thanks to a bright LED light. Spylux can not only be fitted to almost anything using screws, glue or a magnetic fitting, but it also has a flexible moving head so you can point the light in any direction you want. And if you don't have a torch to hand, you can simply take the Spylux out of its holder and use the little lamp on the move.

Spylux also improves safety outside the house. The integrated movement sensor reacts to moving objects or persons over a radius of up to four metres making it ideal for exterior lighting on garages, garden sheds or holiday homes.
